CONSEQUENCES OF CLIMATE CHANGE

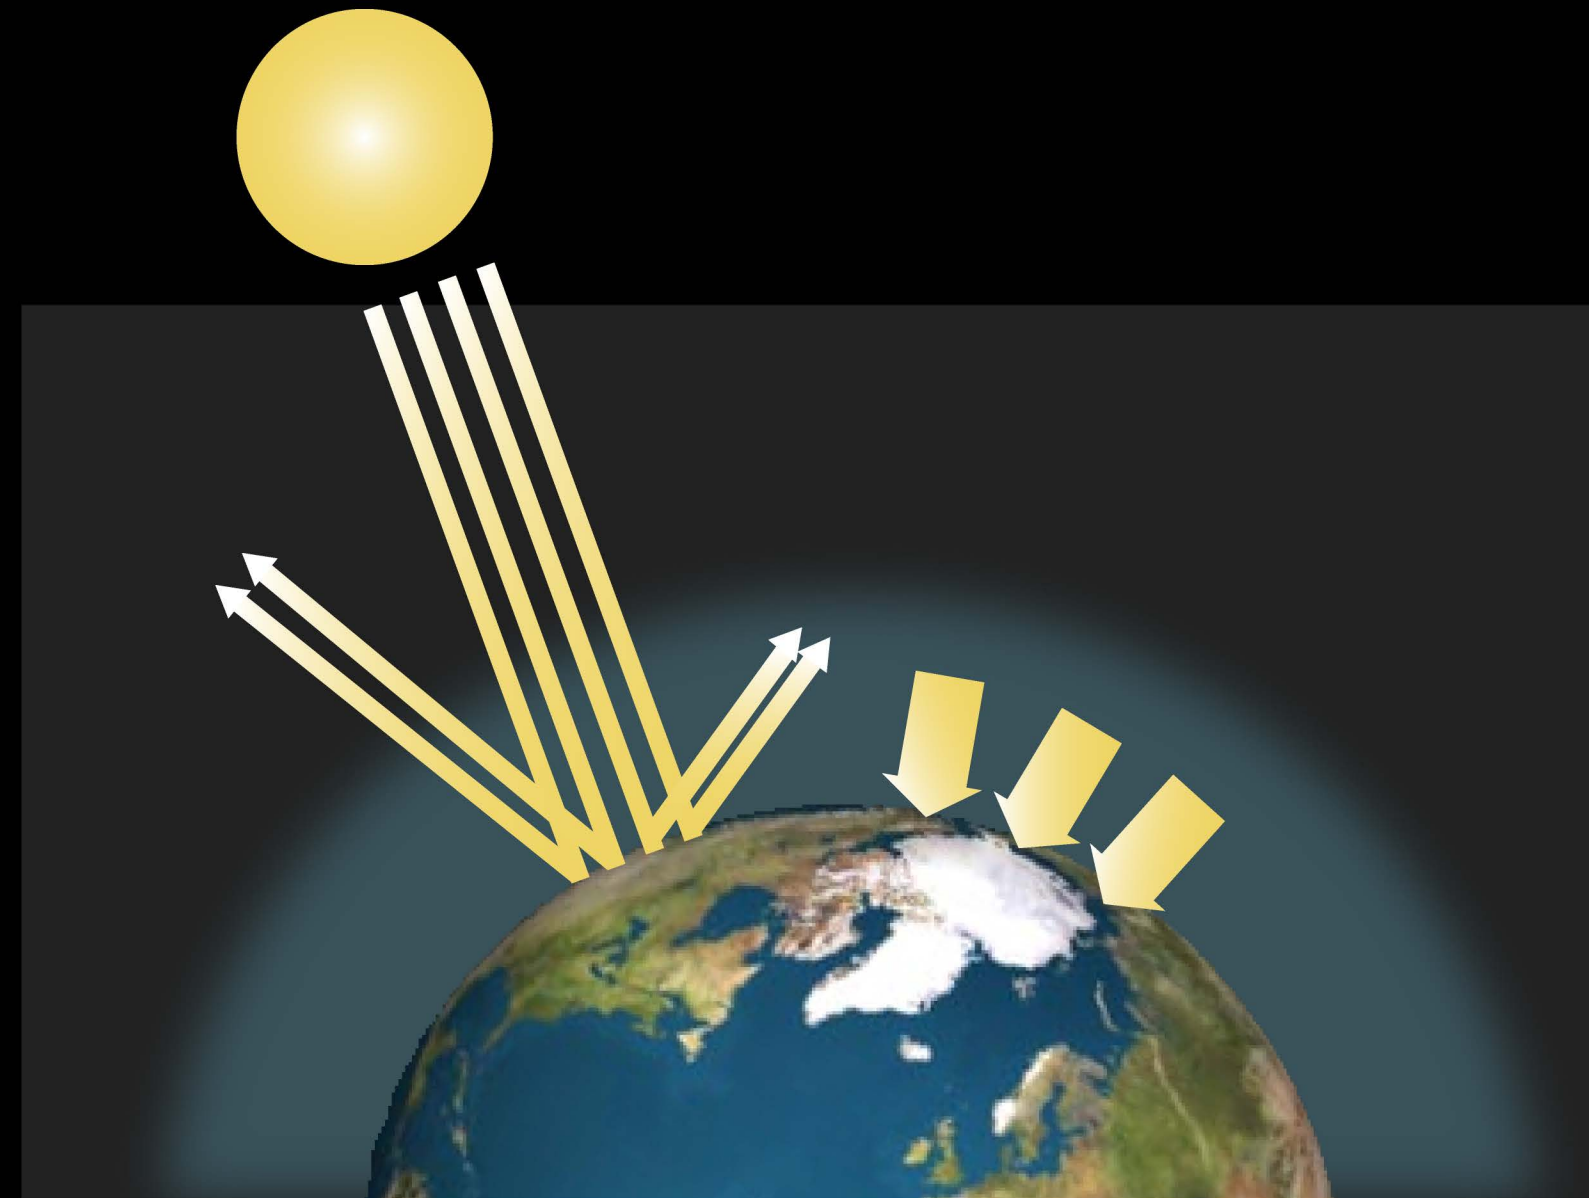

WARMING WORLD

HOW CLIMATE WORKS

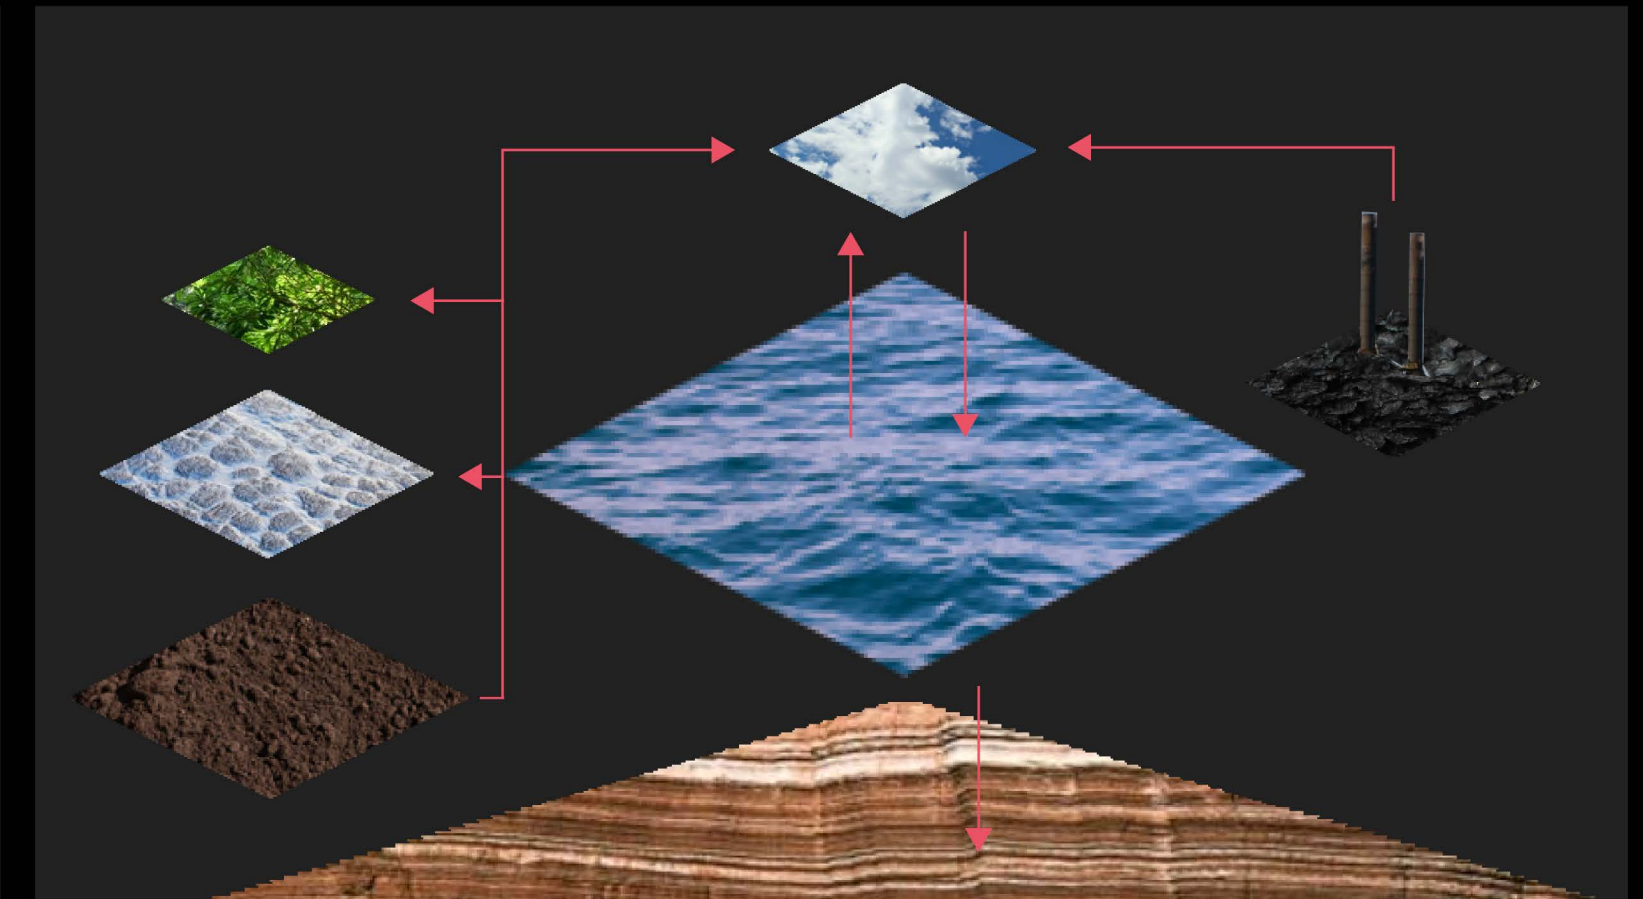

# How CLIMATE WORKS

Climate is driven by the sun

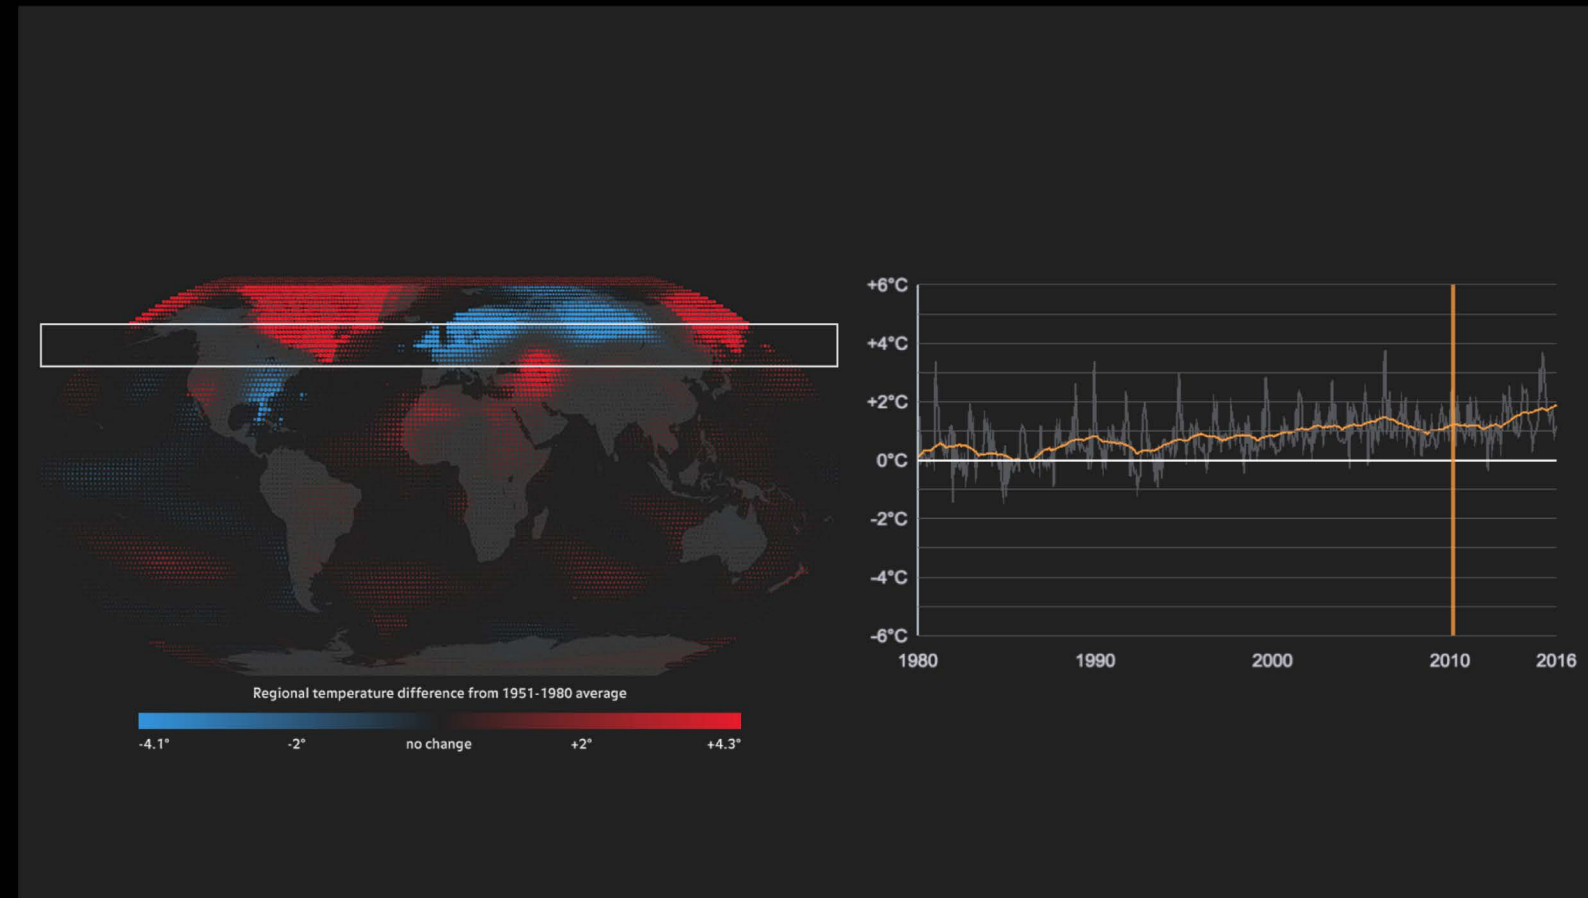

Earth's atmosphere is the medium of climate; the greenhouse effect regulates the planet's temperature

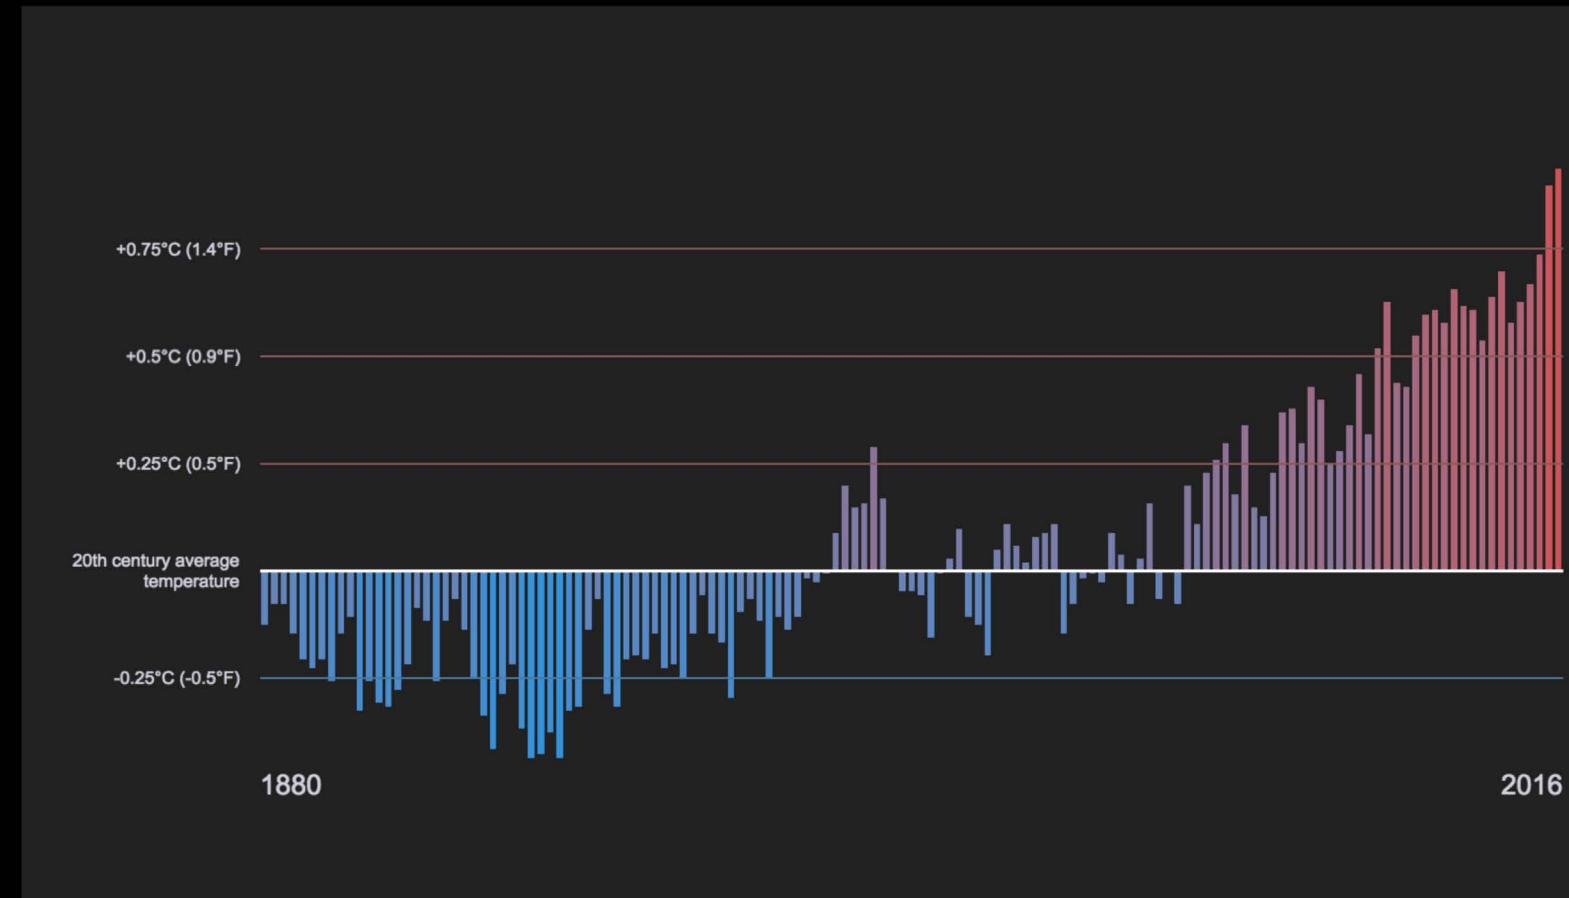

The carbon cycle helps keep Earth's temperature stable

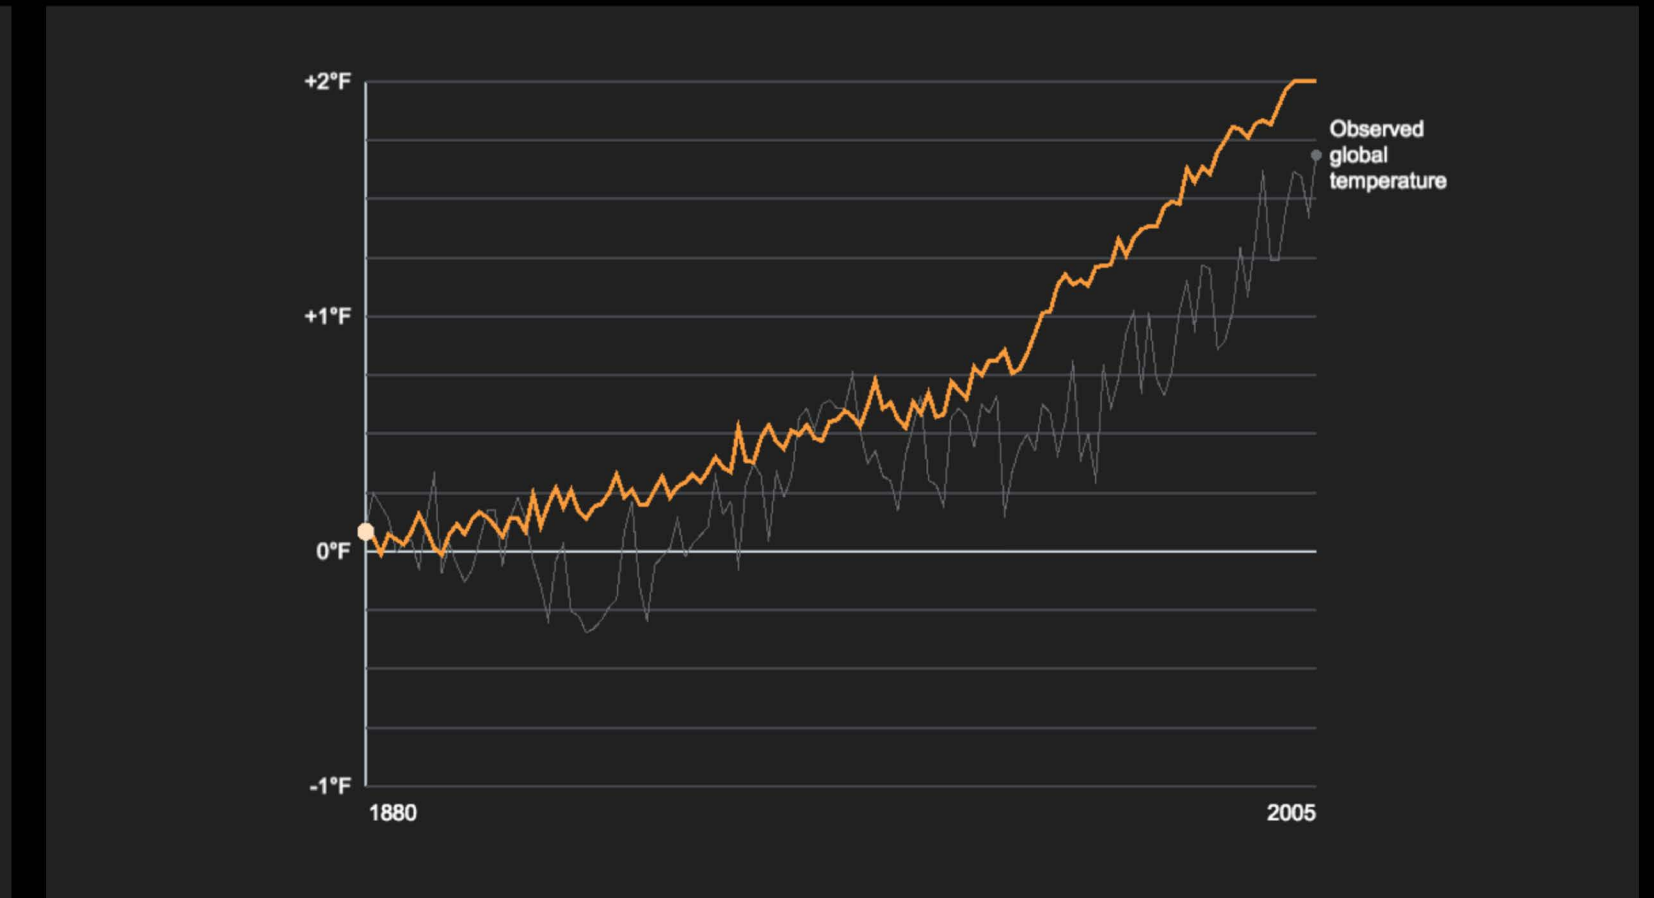

# WARMING WORLD: BIG IDEAS

Different regions of the world are warming faster

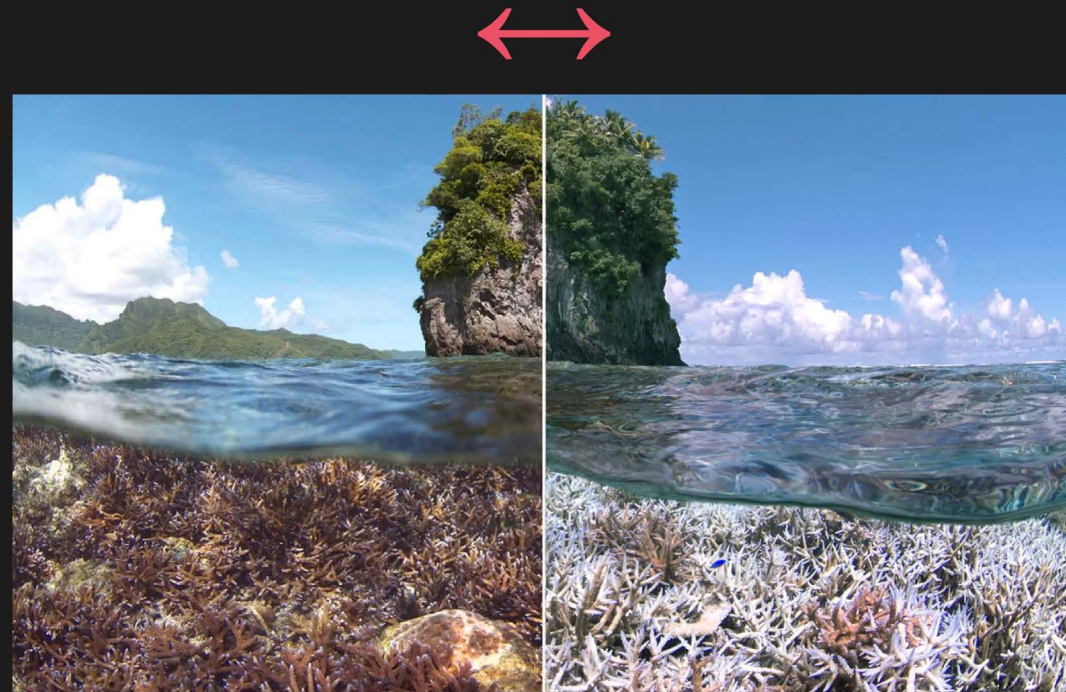

Long term temperature records point to a global warming trend

Burning of fossil fuels are causing temperatures to rise

# CONSEQUENCES OF CLIMATE CHANGE

The impacts of climate change are visible today

Documentary video

While climate change poses great risk, efforts are underway to mitigate effects

Melting ice and rising seas have cascading consequences
